Introduction

Data Collection Description

MONITORING THE FUTURE: A CONTINUING STUDY OF AMERICAN YOUTH, 12TH GRADE, 2021, is conducted by the University of Michigan's Institute for Social Research and receives its core funding under grants from the National Institute on Drug Abuse (R01 DA001411 and R01 DA016575). The Principal Investigator is Richard Miech, with Co-Investigators Lloyd D. Johnston, Jerald G. Bachman, Patrick M. O'Malley, John Schulenberg, and Megan Patrick.

The research project is uniquely comprehensive in several respects: surveys are conducted annually on an ongoing basis; the samples are large and nationally representative; and the subject matter is very broad, encompassing some 1,400 questions per year.

The Monitoring the Future (MTF) Project is designed to explore changes in many important values, behaviors, and lifestyle orientations of contemporary American youth. Two general types of tasks may be distinguished. The first is to provide a systematic and accurate "description" of the youth population of interest in a given year, and to quantify the direction and rate of the changes taking place among them over time. The second task, more analytic than descriptive, involves the "explanation" of the relationships and trends observed to exist.

Data Collection Procedures

The basic research design involves annual data collections from high school seniors during the spring of each year, beginning with the class of 1975. Each data collection takes place in approximately 130 public and private high schools selected to provide an accurate cross-section of high school seniors throughout the United States. Detailed procedures for the 12th grade data collection are explained in detail elsewhere [1, 2, 3].

One limitation in the design of the MTF is that it does not include those young people who drop out of high school before graduation (or before the last few months of the senior year, to be more precise). This excludes a relatively small proportion of each age cohort—between 6 and 20 percent—though not an unimportant segment, since certain behaviors, such as illicit drug use and delinquency, tend to be higher than average in this group. However, the addition of a representative sample of dropouts would increase the cost of the present research enormously because of their dispersion and generally higher level of resistance to being located and interviewed.

For the purposes of estimating characteristics of the entire age group, the omission of high school dropouts does introduce certain biases; however, their small proportion sets outer limits on the bias. For the purposes of estimating "changes" from one cohort of high school seniors to another, the omission of dropouts represents a problem only if different cohorts have considerably different proportions that drop out. There is no reason to expect dramatic changes in those rates across adjacent years for the foreseeable future, and recently published government statistics indicate only very small year-to-year decreases in dropout rates since 1970.

Some may use these high school data to draw conclusions about changes for the entire age group. While the investigators do not encourage such extrapolation, they suspect that the conclusions reached often would be valid, since over 80 percent of the age group is in the surveyed segment of the population and changes among those not in school are likely to parallel the changes among those who are.

Survey Mode

From 1975 to 2018, students completed optically-scannable paper-and-pencil questionnaires during a regular classroom period.

For the 2019 administration, all schools were randomized to a paper or an electronic tablet survey condition: the students in half of the schools completed the traditional paper-and-pencil survey, and the students in the other half of the schools completed surveys via electronic tablets preloaded with the MTF surveys. MTF reports 2019 drug prevalence results using the pooled sample of tablet- and paper-based responses. Differences in substance use prevalence across the two survey modes were negligible, as we detail in this article *The impact of survey mode on US national estimates of adolescent drug prevalence: Results from a randomized controlled study* (MTF survey mode and drug prevalence comparisons 2019).

MTF found evidence of potential mode effects for questions on student attitudes and beliefs. Investigators examining these measures with 2019 MTF data should carefully examine and consider survey mode effects. The magnitude of such effects appear to vary by question, from substantial to negligible. Included in these survey mode effects are possible "screen break" effects, which can affect questions that span multiple tablet screens. For example, questions on perceived risk of substances start with a question stem and then ask about more than a dozen drugs. When these questions are presented in the traditional paper-and-pencil survey, these drugs all fit on one page. For tablet presentation, it was necessary for the listing to span two or more screens. Initial analyses indicated that estimates from these types of survey questions may significantly differ based on the groupings of drugs per screen. The list of variables affected by the changes in screen breaks for multiple-screen questions are detailed in the codebook for the 2020 data (BY20 codebook).

In 2020, all students recorded their survey answers on tablets that the project brought to the schools, preloaded with the MTF surveys. Data collection in 2020 was halted prematurely on March 15, 2020 when the University of Michigan stopped all projects that involved face-to-face data collection because of COVID-19 concerns. This resulted in a 2020 sample size about 25% the size of a regular data collection. Before data collection halted, MTF had surveyed schools in all nine U.S. Census geographical divisions. Detailed analyses indicate that the baseline, curtailed MTF 2020 sample did not differ from the nationally-representative results from previous years in terms of sociodemographics or prevalence of substances that have had stable prevalence in recent years. For example, in 2020 the sample percentage who self-reported as female and the percentage who reported ever using marijuana were within the respective ranges of estimates observed from 2017-2019. These findings support the 2020 data as a random sample of what MTF would have collected with a full data collection. For detailed analysis, please see the appendix to the article, *Trends in Use and Perceptions of Nicotine Vaping Among US Youth From 2017 to 2020* (Vaping trends 2017-2020). Note that the smaller sample sizes result in larger confidence intervals for study estimates; estimates specific to

small demographic groups and survey questions asked of only a small subsample may be quite unstable.

In 2021, MTF for the first time administered its school questionnaires via a web-based survey that students completed on their personal or school-provided device. This switch to a web-based questionnaire was a COVID-19 adaptation that allowed students the flexibility to complete the questionnaire either in a classroom or at home if their school building was closed and they were remote schooling. Access to the survey was through a school-specific web link provided by MTF.

Half-way through the 2021 survey administration, it was discovered by MTF that an additional set of "screen breaks" was impacting the data collection. When the survey was ported to the web-based instrument, changes in presentation of some series of questions was altered to meet the web design requirements. The web survey was reprogrammed to match the tablet presentation of questions in 2019. Please see *Highlights for 2021* and *Appendix D: Screen break details* in this document for details on the effected variables.

Sampling Information

Securing a nationally representative sample of high school seniors in public and private schools is a multi-stage procedure. Stage 1 is the selection of particular geographic areas throughout the contiguous United States. Stage 2 is the selection of one or more high schools in each area, and Stage 3 is the selection of seniors within each high school.

STAGE 1: GEOGRAPHIC AREAS. The geographic areas used in this study are the primary sampling units (PSUs) developed by the Sampling Section of the Survey Research Center (SRC) for use in the Center's nationwide interview studies. Because these same PSUs are used for personal interview studies by the SRC, local field representatives can be assigned to administer the data collections in practically all schools. When this is not possible MTF pays for transportation of SRC staff to the target school.

STAGE 2: SCHOOLS. In the major metropolitan areas more than one high school is often included in the sampling design; in most other sampling areas, a single high school is sampled. In all cases, the selection of high schools are made such that the probability of drawing a school is proportionate to the size of its senior class. When a selected school is unwilling to participate, a replacement school as similar to it as possible is selected from the same geographic area.

STAGE 3: STUDENTS. In schools with fewer than 350 seniors, MTF attempts to include all of them in the data collection. In larger schools, a subset of seniors is often selected, either by randomly sampling classrooms or by some other random method that is convenient for the school and judged to be unbiased. Beginning in 2019, upon request by the school, MTF will survey the entire population of seniors. A sampling weight is assigned to each respondent in order to take account of variations in the sizes of samples from one school to another, as well as the variations in selection probabilities occurring at the earlier stages of sampling. For a table of the sample sizes and student response rates see *Appendix B: Sample Size and Student Response Rates*.

One other important feature of the school sampling procedure should be noted here. All schools (except for half of the initial 1975 sample) are asked to participate in two data collections, thereby permitting replacement of half of the total sample of schools each year. One motivation for requesting that schools participate for two years is administrative efficiency; it is a costly and time-consuming procedure to secure the cooperation of schools, and a two-year period of participation cuts down that effort substantially. Another important advantage is that whenever an appreciable shift in scores from one graduating class to the next is observed, it is possible to check whether the shift might be attributable to some differences in the newly sampled schools. This is done simply by repeating the analysis using only the 60 or so schools which participated both years. Thus far, the half-sample approach has worked quite well, and examination of drug prevalence data from the "matched half-samples" showed that the half samples of repeat schools yielded drug prevalence trends which were virtually identical to trends based on all schools.

SCHOOL RECRUITING PROCEDURES. Early during the fall semester, an initial contact is made with each sampled school. First, a letter is sent to the principal describing the study and requesting permission to survey seniors. The letter is followed by telephone and email contacts from an MTF project staff member. The staff member attempts to address any questions or concerns, and when necessary, makes arrangements to contact and seek permission from other school district officials. The procedures are basically the same for schools asked to participate for the second year.

Once the school's agreement to participate is obtained, beginning in January, arrangements are made by phone and email for administering the questionnaires. A local SRC representative is assigned to work with the school to set a mutually agreeable date for the survey and facilitate the administration.

ADVANCE CONTACT WITH TEACHERS AND STUDENTS. The assigned SRC representative is instructed to contact the school two weeks ahead of the actual date of administration. This contact serves as an occasion to meet the School Contact Person and teachers whose classes will participate. During this visit, the SRC representative is asked to confirm that the parental permission procedures have been completed. They are also asked to provide teachers with a brochure describing the study, a brief set of guidelines about the questionnaire administration, and a supply of flyers to be distributed to the students 7-10 days in advance of the questionnaire administration. The guidelines to the teachers include a suggested announcement to students at the time the flyers are distributed.

From the students' standpoint, the first information about the study usually consists of the teacher's announcement and the short descriptive flyer. In announcing the study, the teachers are asked to stress that the questionnaires are not tests and that there are no right or wrong answers. The flyer tells the students that they will be invited to participate in the study, points out that their participation is strictly voluntary, and stresses confidentiality (including a reference to the fact that the Monitoring the Future Project has a special government grant of confidentiality which allows their answers to be protected). Parental consent involves, at a minimum, the school sending a letter describing the study and an informational flyer to the parents. The letter provides parents with an easy way to decline their child’s participation, if they so wish. Active consent procedures are used when the school or district requires them.

QUESTIONNAIRE ADMINISTRATION. The questionnaire administration in each school is carried out by the local SRC representatives, following standardized procedures detailed in a project instruction manual. The questionnaires are administered in classrooms during normal class periods whenever possible, although circumstances in some schools require the use of larger group administrations. Teachers are not asked to do anything more than introduce the SRC staff members and (in most cases) remain in the classroom to help guarantee an orderly atmosphere for the survey. Teachers are urged to avoid walking around the room so that students may feel free to answer without fear of being observed.

From 1975 through 2018, respondents were asked to complete paper-and-pencil questionnaires designed for optical scanning. Most respondents finish within a 45-minute class period; for those who cannot, an effort is made to provide a few minutes of additional time.

In the 2019 administration, all schools were randomized to a paper or an electronic tablet survey condition: the students in half of the schools completed the traditional paper-and-pencil survey, and the students in the other half of the schools completed surveys via electronic tablets preloaded with the MTF surveys.

In 2020, all students recorded their survey answers on tablets preloaded with the MTF surveys that the project brought to the schools.

In 2021, due to the ongoing COVID-19 pandemic, some schools were not allowing visitors and teaching was being done remotely or a hybrid of in-person and remote learning. Where possible, the classroom teacher was asked to introduce the survey and read an introductory statement prior to the students completing the survey. This information was also presented to the student on screen at the beginning of the web survey. All students completed the web-based survey using their personal or school-provided device. Access to the survey was through a school-specific web link provided by MTF.

PROCEDURES FOR PROTECTING CONFIDENTIALITY. In any study that relies on voluntary reporting of drug use or other illegal acts, it is essential to develop procedures that guarantee the confidentiality of such reports. It is also desirable that these procedures be described adequately to respondents so that they are comfortable about providing honest answers.

The first information given to students about the survey consists of a descriptive flyer emphasizing the confidentiality and voluntary participation of the survey. This information is repeated at the start of the questionnaire administration. Each participating student is instructed to read the message on the cover of the questionnaire or on the first few screens of the tablet or web survey, which stresses the importance and value of the study, notes that answers will be kept strictly confidential, states that the study is completely voluntary, and tells the student, "If there is any question you or your parents would find objectionable for any reason, just leave it blank." The instructions then point out that in a few months a summary of nationwide results will be mailed to all participants, and also that a follow-up questionnaire will be sent to some students after a year. The instructions explain that these are the reasons for asking students to provide their name and address. The instructions explain that survey responses are stored separately from name and address information, and that the two are never connected.

Lastly, in order to protect the confidentiality of responses and the identity of respondents, a number of alterations have been made in the original dataset to prepare it for public release; these alterations are described later in the section MTF Variable Information.

Content Areas and Questionnaire Design

Given the breadth of content of the questions in the Monitoring the Future surveys, the study is not presented to respondents as a "drug use study". Though drug use and related attitudes are the topics which receive the most extensive coverage in the Monitoring the Future project, the questionnaires also deal with a wide range of other subject areas, including attitudes about government, social institutions, race relations, changing roles for women, educational aspirations, occupational aims, and marital and family plans, as well as a variety of background and demographic factors.

Because many questions are needed to cover all of these topic areas, much of the questionnaire content is divided into different questionnaire forms: five forms were used in 1975-88, and a sixth form was added in 1989. The questionnaires are randomly distributed to participants in equal proportion, with each student completing one form. This sequence produces five or six virtually identical subsamples.

About one-third of each questionnaire form consists of key or "core" variables that are common to all forms. All demographic variables and some measures of substance use are included in this "core" set of measures. This use of the full sample for substance use and demographic measures provides a more accurate estimation on these dimensions and also makes it possible to link them statistically to all the other measures that are included on fewer forms.

The following list provides the subject area codes and definitions that are used in the cross-time index of grade 12 questionnaire items provided separately in this archive. Where appropriate, the same code letters have been assigned to each subject area in the 8th/10th grade cross-time index.

Measurement Content Areas

A. DRUGS. Drug use and related attitudes and beliefs, drug availability and exposure, surrounding conditions and social meaning of drug use, views of significant others regarding drugs.

B. EDUCATION. Educational lifestyle, values, experiences, and environments

C. WORK AND LEISURE. Vocational values, meaning of work and leisure, work and leisure activities including computer use, preferences regarding occupational characteristics and type of work setting.

D. SEX ROLES AND FAMILY. Values, attitudes, and expectations about marriage, family structure, sex roles, and sex discrimination.

E. POPULATION CONCERNS. Values and attitudes about overpopulation and birth control.

F. CONSERVATION, MATERIALISM, EQUITY, etc. Values, attitudes, and expectations related to conservation, pollution, materialism, equity, and the sharing of resources. Preferences regarding type of dwelling and urbanicity.

G. RELIGION. Religious affiliation, practices, and views.

H. POLITICS. Political affiliation, activities, and views.

I. SOCIAL CHANGE. Values, attitudes, and expectations about social change.

J. SOCIAL PROBLEMS. Concern with various social problems facing the nation and the world.

K. MAJOR SOCIAL INSTITUTIONS. Confidence in and commitment to various major social institutions (business, unions, branches of government, press, organized religion, military, etc.).

L. MILITARY. Views about the armed services and the use of military force. Personal plans for military service.

M. INTERPERSONAL RELATIONSHIPS. Qualitative and quantitative characteristics of cross-age and peer relationships. Interpersonal conflict.

N. RACE RELATIONS. Attitudes toward and experiences with other racial groups.

O. CONCERN FOR OTHERS. Concern for others; voluntary and charitable activities.

P. HAPPINESS. Happiness and life satisfaction, overall and in specific life domains.

Q. OTHER PERSONALITY VARIABLES. Attitudes about self, including self-esteem, locus of control, loneliness, risk-taking, trust in others, importance placed on various life goals, counterculture orientation, hostility, boredom, anxiety.

R. BACKGROUND. Demographic and family background characteristics, living arrangements

S. DEVIANT BEHAVIOR AND VICTIMIZATION. Delinquent behaviors, driving violations and accidents (including those under the influence of drugs), victimization experiences.

T. HEALTH. Health habits, somatic symptoms, illness, medical treatment, COVID-19.

Representativeness and Validity

The samples for this study are intended to be representative of high school seniors attending private or public schools throughout the 48 contiguous states. We have already discussed the fact that this definition of the sample excludes one important portion of the age cohort: those who have dropped out of high school before nearing the end of the senior year. Given the aim of representing high school seniors, it will now be useful to consider the extent to which the obtained samples of schools and students are likely to be representative of all high school seniors and the degree to which the data obtained are likely to be valid.

It is possible to distinguish at least four ways in which survey data of this sort might fall short of being fully representative. First, some sampled schools refuse to participate, which could introduce some bias. Second, the failure to obtain questionnaire data from 100 percent of the students sampled in participating schools could also introduce bias. Third, the answers provided by participating students are open to both conscious and unconscious distortions which could reduce validity. Finally, limitations in sample size and/or design could place limits on the accuracy of estimates.

SCHOOL PARTICIPATION. As noted in the description of the sampling design, schools are invited to participate in the study for a two-year period. For each school that declines to participate, a similar school (in terms of size, geographic area, urbanicity, etc.) is recruited as a replacement for that "slot." Since the study's inception, either an original school or a replacement school has been obtained for greater than 90% of the sample units. About 95% of schools which have participated for one data collection have agreed to participate for a second. The selection of replacement schools almost entirely removes problems of bias in region, urbanicity, and the like that might result from certain schools refusing to participate. Other potential biases are subtler, however. For example, if it turned out that most schools with "drug problems" refused to participate, that would seriously bias the drug estimates derived from the sample. And if any other single factor were dominant in most refusals that also might suggest a source of serious bias. In fact, however, the reasons for schools' refusals to participate are varied and largely a function of happenstance events of the particular year. Thus, the investigators feel fairly confident that school refusals have not seriously biased the surveys.

STUDENT PARTICIPATION. Completed questionnaires are obtained from three- fourths to four-fifths of all 12th graders sampled. The single most important reason that students are missed is that they are absent from class at the time of data collection, and in most cases, it is not workable to schedule a special follow-up data collection for them. Students with fairly high rates of absenteeism also report above-average rates of drug use; therefore, there is some degree of bias introduced by missing the absentees. That bias could be corrected through the use of special weighting; however, this course was not chosen because the bias in estimates (in drug use, where the potential effect was hypothesized to be largest) was determined to be quite small and because the necessary weighting procedures would have introduced undesirable complications. In addition to absenteeism, student nonparticipation occurs because of schedule conflicts with school trips and other activities which tend to be more frequent than usual during the final months of the senior year. Of course, some students refuse to complete or turn in a questionnaire, either on their own or because their parents refused consent. However, SRC representatives in the field estimate this proportion to be only about two percent.

VALIDITY OF SELF-REPORT DATA. Survey measures of delinquency and of drug use depend upon respondents reporting what are, in many cases, illegal acts. Thus, a critical question is whether such self-

reports are likely to be valid. Like most studies dealing with these areas, the present study does not include direct, objective validation of the present measures; however, the considerable amount of inferential evidence which exists strongly suggest that the self-report questions produce largely valid data. A number of factors have given the investigators reasonable confidence about the validity of the responses to what are presumably among the most sensitive questions in the study: a low non-response rate on the drug questions; a large proportion admitting to some illicit drug use; the consistency of findings across several years of the present study; strong evidence of construct validity (based on relationships observed between variables acting as expected); a close match between these data and the findings from other studies using other methods; and the findings from several methodological studies that have used objective validation methods.

As for the other measures, a few have a long and venerable history — as scholars of the relevant literature will recognize — though some of these measures have been modified to fit the present questionnaire format. Many questions, however, have been developed specifically for this project through a process of question writing, pilot testing, pretesting, and question revision or elimination. Some have already been included in other publications from the study, but many have not; therefore, there exists little empirical evidence of their validity and reliability.

ACCURACY OF THE SAMPLE. A sample survey can never provide the same level of accuracy as would be obtained if the entire target population were to participate in the survey -- in the case of the present study, about 3 – 4 million seniors per year. But perfect accuracy among this population would be extremely expensive and certainly not a good use of resources considering the fact that a high level of accuracy can be provided by a carefully designed probability sample. The accuracy of the sample in this study is affected both by the size of the student sample and by the number of schools in which they were clustered. For the purposes of this introduction, it is sufficient to note that virtually all estimates based on the total sample have confidence intervals of +/- 1.5 percentage points or smaller - sometimes considerably smaller. This means that, had the project been able to invite all schools and all seniors in the 48 contiguous states to participate, the results from such a massive survey would be within an estimated 1.5 percentage points from the present sample findings 95 times out of 100. This is a quite high level of accuracy, and one that permits the detection of fairly small trends from one year to the next.

Because of the complex sampling design, standard means of assessing confidence intervals are not appropriate. In years 2017 and earlier, Appendix C of Volume 1 reported information on how to calculate confidence intervals for point estimates and how to calculate statistics that test the significance of changes over time or of differences between subgroups. This appendix is no longer necessary with the availability of MTF's complex sample design variables through the virtual data enclave (VDE) provided by the National Addiction & HIV Data Archive Program (NAHDAP). After completing an application process that includes a signed pledge to protect the confidentiality of the data, researchers are permitted access to the restricted data. This secure, remote VDE access allows researchers to compute such statistics directly using the unaltered MTF sampling weights and clustering variables. The restricted MTF data can be found here: Monitoring the Future (MTF) Restricted-Use Cross-Sectional Datasets (Note that interested readers may also refer to Appendix C of earlier volumes for the information it provides about design effects and how their computational influence varies by substance.)

CONSISTENCY AND THE MEASUREMENT OF TRENDS. One other point is worth noting in a discussion of the validity of the findings. The Monitoring the Future Project is, by intention, a study designed to be sensitive to changes from one time to another. Accordingly, the measures and procedures

have been standardized and applied consistently across each data collection. To the extent that any biases remain because of limits in school and/or student participation, and to the extent that there are distortions (lack of validity) in the responses of some students, it seems very likely that such problems will exist in much the same way from one year to the next. In other words, biases in the survey estimates should tend to be consistent from one year to another, which means that the measurement of trends should be affected very little by such biases.

INTERPRETING RACIAL/ETHNIC DIFFERENCES. Until 2005, racial/ethnic identification was provided for the two largest racial/ethnic subgroups in the population — those who identified themselves as white or Caucasian and those who identified themselves as Black or African American. Identification was not provided for the other ethnic categories (Native Americans, Asian Americans, Mexican Americans, Puerto Rican Americans, or other Latin Americans) since each of these groups comprised a small proportion of the sample in any given year, which means that their small Ns (in combination with their clustered groupings in a limited number of schools) would yield estimates which would be too unreliable. Because of increases in the number of those who identify themselves as one of the Hispanic groups, we now include identification for this category.

However, the analyst should bear in mind that Blacks and Hispanics - each of which constitutes approximately 8-15 percent of each year's sample - are represented by perhaps as few as 200 respondents per year on any single questionnaire form. Further, because our sample is a stratified clustered sample, it yields less accuracy than would be yielded by a pure random sample of equal size (see Appendix B of the annual volumes for details). Therefore, because of the limited number of cases, the margin of sampling error around any statistic describing Blacks or Hispanics is larger than for most other subgroups.

There exists, however, a way to determine the replicability of any finding involving racial comparisons. Since most questions are repeated from year to year, one can readily establish the degree to which a finding is replicated by looking at the results in prior and subsequent years. Given the relatively small Ns for minority groups, the analyst is urged to seek such replication before putting much faith in the reliability of any particular racial comparison.

There are factors in addition to reliability, however, which could be misleading in the interpretation of racial differences. Given the social importance which has been placed on various racial differences reported in the social science literature, the investigators would like to caution the analyst to consider the various factors which could account for differences. These factors fall into three categories: differential representation in the sample, differential response tendencies, and the confounding of race with a number of other background and demographic characteristics. The following discussion is based on analyses that were conducted prior to 2005, when identifiers for Hispanics were not included, so the discussion is specific to Blacks. However, the points made, particularly those about differential representation and confounding of race/ethnicity with other background and demographic characteristics, would be relevant to Hispanics, as well.

DIFFERENTIAL REPRESENTATION. Census data characterizing American young people in the approximate age range of those in this sample show somewhat lower proportions of Blacks than whites remain in school through the end of the twelfth grade (also, the Hispanic group has considerably higher dropout rates than either whites or Blacks, which means that student samples become increasingly less representative of the entire age group at higher grades.) Therefore, a slightly different segment of the Black population than of the white population resides in the target population of high school seniors.

Further, the samples appear to under represent slightly those Black males who, according to census figures, are in high school at the twelfth-grade level. Identified Black males comprise about 6 percent of the sample, whereas census data suggest that they should comprise around 7 percent. Therefore, it appears that more Black males are lost from the target population than white males or females of either race. This may be due to generally poorer attendance rates on the part of some Black males and/or unwillingness on the part of some to participate in data collections of this sort.

In sum, a smaller segment of the Black population than of the white population of high school age is represented by the data contained here. Insofar as any characteristic is associated with being a school dropout or absentee, it is likely to be somewhat disproportionately underrepresented among Blacks in the sample.

DIFFERENTIAL RESPONSE TENDENCIES. In examining the full range of variables, racial differences in response tendencies have been noted. First, the tendency to state agreement in response to agree-disagree questions is generally somewhat greater among Blacks than among whites. For example, Blacks tend to agree more with the positively worded items in the index of self-esteem, but they also tend to agree more with the negatively worded items. As it happens, that particular index has an equal number of positively and negatively worded items, so that any overall "agreement bias" should be self-canceling when the index score is computed. However, group differences in agreement bias are likely to affect results on questions employing the agree-disagree format. Fortunately, most of the questions are not of that type.

There has also been observed a somewhat greater than average tendency for Black respondents to select extreme answer categories on attitudinal scales. For example, even if the same proportion of Blacks as whites felt positively (or negatively) about some subject, fewer of the whites are likely to say they feel very positively (or negatively). The analyst should be aware that differences in responses to particular questions may be related to these more general tendencies.

A somewhat separate issue in response tendency is a respondent's willingness to answer particular questions. The missing data rate may reflect willingness to answer particular questions. If a particular question or set of questions has a missing data rate higher than is true for the prior or subsequent questions, then presumably more respondents than usual were unwilling (or perhaps unable) to answer it. Such an exaggerated missing data rate exists for Black males on the set of questions dealing with the respondent's own use of illicit drugs. Clearly a respondent's willingness to be candid on such questions depends on his or her trust of the research process and of the researchers themselves. The exaggerated missing data rates for Black males in these sections may reflect, at least in part, less trust. The analyst is advised to check for exceptional levels of missing data when making comparisons on any variable in which candor is likely to be reduced by lower system trust. One bit of additional evidence related to trust in the research process is that higher proportions of Blacks than whites reported that if they had used marijuana or heroin they would not have been willing to report it in the survey.

COVARIANCE WITH OTHER FACTORS. Some characteristics such as race are highly confounded (correlated) with other variables -- variables that may, in fact, explain some observed racial differences. Put another way, at the aggregate level we might observe a considerable racial difference on some characteristic, but once we control for some background characteristic such as socio-economic level or region of the country -- that is, once we compare the Black respondents with whites who come from similar backgrounds -- there may be no racial difference at all.

Race is correlated with important background and demographic variables. A higher proportion of Blacks live in the South and a higher proportion grew up in families with the mother and/or father absent, and more had mothers who worked while they were growing up. A substantially higher proportion of Blacks are Baptists, and Blacks tend to attribute more importance to religion than do whites. A higher proportion of Black respondents have children, and on the average, they are slightly older than the white sample. As was mentioned earlier Black males are more underrepresented in our sample than Black females.

These differences in background, demographic, and descriptive characteristics are noted because, in any attempt to understand why a racial difference exists, one would want to be able to examine the role of these covarying characteristics.

MTF Variable Information

Questionnaire Change Documents, 2021

Please see the documents *2021 MTF QChanges by form.pdf* and *2021 MTF QChanges by type of change.pdf* for details on variables added, dropped and changed in 2021. Please note that questions impacted by the screen break issue are *not* noted in the QChanges documents. Please see *Appendix D: Screen break details* for variables effected by the screen break issue.

Non-survey variables included in the data files

Sample weight variable and Complex sample design variables

As noted in the study description, the MTF sample is drawn to be nationally-representative of the contiguous United States. To achieve this representative sample, a three-stage sampling procedure is used. Variables are maintained to account for the sampling design; however, these design variables (stratum and cluster), along with the original sampling weight variable, are omitted from the public use data files for reasons of confidentiality.

The MTF does provide an altered sampling weight variable, ARCHIVE_WT, for use when analyzing the public use data. The weight variable was altered from its original version to a modified version prior to public distribution of the data. THIS RESULTS IN SLIGHT DISCREPANCIES BETWEEN THE PERCENTAGES AND N SIZES IN THE ANNUAL ISR VOLUMES AND THOSE FROM WEIGHTED ANALYSES OF THE PUBLIC USE DATASETS. Typically, the variation is less than 1%.

Note: *The weight variable provided, ARCHIVE_WT, should be used for all analyses*.

For researchers interested in combining two or all three grades (8, 10, 12) into one analysis, please see *Appendix C: MTF's Complex Sample Design and Combining Multiple Grades for Analysis*. Special considerations are needed to adjust the sampling weight (and clustering) when combining grades for analysis.

OF SPECIAL NOTE: For researchers who wish to incorporate the complex sample design (stratum, cluster) and the unaltered sampling weight variables in their work, these variables are now available through restricted access from NAHDAP. Please see Monitoring the Future (MTF) Restricted-Use Cross-Sectional Datasets for more information.

Respondent ID variable

An ID variable is provided in each data set. The RESPONDENT_ID is unique *within* year and can be used to link cases in the core data file (DS1) with each of the form-specific data files (DS2-DS7) in a given year.

Variable	Variable label	Notes
RESPONDENT_ID	R'S ID - SERIAL #	Unique case identifier *within* year

Data management note: It is recommended that users start their work with the core data set (DS1). DS1 is a compilation across all six survey forms of Part B (substance use) and Part C (demographics) of the surveys - the parts common to all forms - plus other substance use variables of interest that may not be on all forms (e.g. vaping-related variables). Using the DS1 file (or a subset of the file), merge the form-specific data needed from data file(s) DS2-DS7 with the core data. Approaching the data management in this way will simplify the process of combining data across forms as users will not need to rename as many variables or, perhaps, not need to combine as many data files.

Respondent's geographic location information

Three variables have been included in the data sets to describe the respondent's geographic location without identifying school or state. These are (1) census region (Northeast, Midwest, South, and West), (2) whether or not the school is located in a Metropolitan Statistical Area (MSA), and (3) whether or not the school is located in a Large MSA.

Item number	Variable label	Notes
80013	SCHL RGN-4 CAT	1=Northeast 2=Midwest 3=South 4=West
80016	SELF-REP/NOT=0	Whether or not the school is located in a Metropolitan Statistical Area (MSA)
80017	SMSA/NON-SMSA=0	Whether or not a school is located in a large MSA

Survey mode and design variables for 2021

Data collection of the full nationally-representative samples of 8th, 10th, and 12th graders resumed in 2021, with some changes necessitated by the ongoing COVID-19 pandemic. While the sampling procedures remained consistent, survey administrations were adapted for the hybrid teaching environments - remote and in-class learning. The MTF questionnaires were converted to web-based surveys. Students were provided a link to the survey, and the surveys could be completed on their own device or one provided by the school at home or in the classroom.

These two variables are included in all data sets and provide details for the 2021 data collection:

Variable	Variable label	Notes
V545	89978:SURVEY MODE: 1=PAPER 2=TABLET 3=WEB	For 2021, all surveys were administered via web. This variable replaces TABLET (89977:RESPONDENT: TABLET=1 PAPER=0) in prior years.
V548	90016:MODE OF SURVEY ADMIN	Response values for 2021 are: 4=SYNCHRONOUS (surveys administered to students in a classroom all together) 5=ASYNCHRONOUS (during a specific time frame but not all together) 6=MULTIPLE TYPES (combination of the two)

About half-way through the 2021 administration, it was discovered that parts of some questions were organized differently for the 2021 web survey than for the 2019 tablet survey, i.e. sets of questions appeared on different "screens" when comparing the web and tablet surveys. MTF has noted earlier in this codebook that the mode of administration and the potential impact of differing screen breaks may influence estimates, so the web surveys were reprogrammed to match the "screen breaks" in the 2019 tablet surveys. Please see *Appendix D: Screen break details* in this document for the variables impacted by the screen break issue in 2021. (For details about the 2020 data screen break issue, please see the codebook for the 2020 12th grade data (BY20 codebook).)

This variable provides information to differentiate the data collected before and after the survey version change during the 2021 data collection:

Variable	Variable label	Notes
SURVEY_VERSION	90012:SURVEY VERSION	Half-way through the 2021 administration, the surveys were reprogrammed to match "screen breaks" in the 2019 tablet surveys. 3=ORIGINAL SURVEY (before the change) 4=REPLACEMENT SURVEY (to match 2019)

Randomization of question sets

In an effort to shorten the length of the surveys, an experiment was conducted such that "blocks" of questions were asked of some respondents and not others. Each survey had two blocks that were randomly assigned within form to a respondent. The blocks are labeled "blue" and "orange".

This variable provides information to differentiate the "blue" and "orange" block questions:

Variable	Variable label	Value labels
RANDOM_GROUP	90013:RANDOM_GROUP	1="BLUE:(1)" 2="ORANGE:(2)"

Variables impacted by this randomization have an additional missing data code in the data files and are labeled as

-8 = "R ASSIGNED BLUE:(-8)"
(i.e. missing data because the question is in the orange block for this form and the respondent received the blue block of questions)

OR

-8 = "R ASSIGNED ORANGE:(-8)"
(i.e. missing data because the question is in the blue block on this form and the respondent received the orange block of questions)

Please see *Appendix E: Randomization of question blocks* for form-specific details of the variables impacted by the randomization experiment

Form 3 Substance use consequences question presentation experiment

With the programming of the web version of the survey in 2021, an experiment was conducted with Form 3 to determine the best way to present the series of questions about substance use and potential consequences of use: a grid presentation or a separate series of questions for each substance (alcohol, marijuana, other illicit drugs). For the grid presentation, the respondents read a single question and indicate in a separate column for each of the three substances whether or not they have experienced the consequence. For the separate series presentation, the same set of questions are presented, but the questions are presented in three separate lists, one for each substance (alcohol, marijuana, other illicit drugs). Please see *Appendix F: Form 3 Substance use consequences question presentation experiment* for examples of presentation formats and the detailed question information.

This variable provides information to differentiate the "grid" and "separate" series of questions, along with a code that indicates the questions are only asked on Form 3:

Variable	Variable label	Value labels
RANDOM_TEST	RANDOM TEST FORM 3: D7 AND D8	0="ONLY ON FORM 3:(0)" 1="GRID FORMAT:(1)" 2="SEPARATE FORMAT:(2)"

Variables omitted and recoded to protect confidentiality

In order to ensure confidentiality and protect the identity of the MTF survey respondents, some variables have been omitted or altered before release in the public data sets. The information in this section provides details for the omitted and recoded variables.

Omitted Variables.

The following variables are omitted from the public data set(s).

All Forms

Item number	Variable label	Question text	Notes
00010	R'S BIRTH YEAR	In what year were you born?	Please see section on RECODED VARIABLES
00020	R'S BIRTH MONTH	In what month were you born?	AGE <> 18 DICHOTOMY
		How do you describe yourself? (Select one or more responses.)	
00041	R'S RACE BLACK	Black or African American	Please see section on RECODED VARIABLES R'S RACE B/W/H
00042	R'S RACE CHICANO	Mexican American or Chicano	
00043	R'S RACE CUBAN	Cuban American	
00044	R'S RACE PUERTO	Puerto Rican	
00045	R'S RACE OTH HIS	Other Hispanic or Latino	
00046	R'S RACE ASIAN	Asian American	
00047	R'S RACE WHITE	White (Caucasian)	
00048	R'S RACE IND/AK	American Indian or Alaska Native	
00049	R'S RACE HI/OTPI	Native Hawaiian or Other Pacific Islander	
36960	R'S RACE MID EASTERN	Middle Eastern	
		How many brothers and sisters do you have? (Include stepbrothers and sisters and half-brothers and sisters.)	
00075	# OLDER BR/SIS	Older brothers and sisters	Please see section on RECODED VARIABLES R'S # SIBLINGS
00076	# YOUNGER BR/SIS	Younger brothers and sisters	

Omitted Variables, continued.

All Forms

Item number	Variable label	Question text	Notes
		Which of the following people live in the same household with you? (Mark all that apply.)	
00080	R'S HSHLD ALONE	I live alone	The questions about Rs Household composition are omitted. Only questions for R'S HSHLD: FATHER, MOTHER, SIBLING are included in the data sets
00120	R'S HSHLD GRPRNT	Grandparent(s)	
00130	R'S HSHLD SPOUSE	My husband/wife	
00140	R'S HSHLD CHLDRN	My child(ren)	
00150	R'S HSHLD RELTVS	Other relative(s)	
00160	R'S HSHLD NONRLT	Non-relative(s)	
34810	R'S HSHLD OTHER	Other, specify	
00360	R'S RELGS PRFNC	What is your religious preference?	Not available in the public use data

Form 1 - omitted from the public use data

Item number	Variable label	Question text
22155	CURRENT HEIGHT 3	What is your current height (in feet and inches) without shoes?
22165	CURRENT WEIGHT 3	What is your current weight (in pounds) without shoes or clothing?

Form 2 - omitted from the public use data

Item number	Variable label	Question text
25880	ARRSTD&TKN 2 POL	During the LAST 12 MONTHS, how often have you. . . Been arrested and taken to a police station?

Form 5 - omitted from the public use data

Item number	Variable label	Question text
22155	CURRENT HEIGHT 3	What is your current height (in feet and inches) without shoes?
22165	CURRENT WEIGHT 3	What is your current weight (in pounds) without shoes or clothing?

Recoded Variables

The following variables are recoded and included in the public data set(s).

All datasets

Item Number	Variable Label	Additional notes
89848	AGE <> 18 DICHOTOMY	AGE <> 18 DICHOTOMY 1=younger than 18 years old, 2=18 years old or more -9=missing data on birth year, or birth month if it is required Derived from 00010 R'S BIRTH YEAR, and, if needed, 00020 R'S BIRTH MONTH, and the month that the questionnaire was administered. If the birth year value indicates that the respondent is 18, then the month of administration is compared to the month of birth. If the questionnaire was given before the month of birth, or if both were the same month, then the respondent is determined to be younger than 18.
89501	R'S RACE	In the public use files: 1=BLACK 2=WHITE 3=HISPANIC, -9=All Other Codes, multiple responses, and missing data From 2006 forward, each of the questionnaire forms contains the new version of the race question which was introduced on half of the forms in 2005. The new version lists several different response options and prompts the respondents to select all that apply to them. In cases where a respondent selected options which fell into more than one of the three recoded categories (Black, White, Hispanic), the value for the recoded variable was deleted and defined as missing. Of note: in 2021, Middle Eastern was added to the response options.
89849	R'S #SIBLINGS	Responses to questions 00075:# OLDER BR/SIS and 00076:# YOUNGER BR/SIS were combined and bracketed before original variables were omitted. Response options for both variables before they were combined were: 0=None, 1=1 sibling, 2=2 siblings, 3=3 or more siblings

Recoded Variables, continued.

All datasets

Item Number	Variable Label	Question text	Additional notes
00660	# TCKTS AFT DRNK	How many of these tickets or warnings occurred after you were . . . Drinking alcoholic beverages?	Response options truncated to 0=None 1=One 2=Two 3=Three or More
00670	# TCKTS AFT MARJ	How many of these tickets or warnings occurred after you were . . . Using marijuana or hashish?	Response options truncated to 0=None 1=One 2=Two 3=Three or More
00680	# TCKTS AFT OTDG	How many of these tickets or warnings occurred after you were . . . Using other illegal drugs?	Response options truncated to 0=None 1=One 2=Two 3=Three or More
00700	# ACDTS AFT DRNK	How many of these accidents occurred after you were . . . Drinking alcoholic beverages?	Response options truncated to 0=None 1=One 2=Two 3=Three or More
00710	# ACDTS AFT MARJ	How many of these accidents occurred after you were . . . Using marijuana or hashish?	Response options truncated to 0=None 1=One 2=Two 3=Three or More
00720	# ACDTS AFT OTDG	How many of these accidents occurred after you were . . . Using other illegal drugs?	Response options truncated to 0=None 1=One 2=Two 3=Three or More

Recoded Variables, continued.

Form 6

Item Number	Variable Label	Question text	Additional notes
23530	EVER HELD BACK	Have you ever had to repeat a grade in school?	Response options are recoded to: 1=No 2=Yes
23540	NEED SUMMER SCHL	Did you ever attend summer school to make up for poor grades or to keep from being held back?	Response options are recoded to: 1=No 2=Yes
25140	EVER SUSPENDED	Have you ever been suspended or expelled from school?	Response options are recoded to : 1=No 2=Yes

Core dataset

For cocaine: #X COKE [LIFETIME, LAST12MO, LAST30DA]: Data from forms 1, 3, 4, and 6 are combined responses to separate questions concerning "crack" and "cocaine in any other form".

Item Number	Variable Label	Question text	Additional notes
		On how many occasions (if any) have you taken cocaine (sometimes called "coke," "crack," "rock").	
00950	#X COKE/LIFETIME	. . . in your lifetime?	Single question on forms 2 and 5
00960	#X COKE/LAST12MO	. . . during last 12 months?	Single question on forms 2 and 5
00970	#X COKE/LAST30DA	. . . during last 30 days?	Single question on forms 2 and 5

#X COKE [LIFETIME, LAST12MO, LAST30DA], continued

Item Number	Variable Label	Question text	Additional notes
		On how many occasions (if any) have you used "crack" (cocaine in chunk or rock form)	
22260	#X CRACK/LIFETIME	. . . . . in your lifetime?	Question on forms 1, 3, 4 & 6; responses combined with 22320:#X OTH COKE/LIFE to create a composite 00950: #X COKE/LIFETIME variable
22270	#X CRACK/LAST12MO	. . . during the last 12 months?	Question on forms 1, 3, 4 & 6; responses combined with 22330:#X OTH COKE/12MO to create a composite 00960: #X COKE/LAST12MO
22280	#X CRACK/LAST30DAY	. . . during the last 30 days?	Question on forms 1, 3, 4 & 6; responses combined with 22340:#X OTH COKE/30DA to create a composite 00970: #X COKE/LAST30DA variable
		On how many occasions (if any) have you used cocaine in any other form	
22320	#XOTH COKE/LIFE	. . . in your lifetime?	Question on forms 1, 3, 4 & 6; responses combined with 22260 #X CRACK/LIFETIME To create a composite 00950: #X COKE/LIFETIME variable
22330	#XOTH COKE/12MO	. . . during the last 12 months?	Question on forms 1, 3, 4 & 6; responses combined with 22270:#X CRACK/LAST12MO to create a composite 00960: #X COKE/LAST12MO
22340	#XOTH COKE/30DA	. . . during the last 30 days?	Question on forms 1, 3, 4 & 6; responses combined with 22280:#X CRACK/LAST30DAY to create a composite 00970: #X COKE/LAST30DA variable

For heroin: #X 'H' [LIFETIME, LAST12MO, LAST30DA]: Data from forms 2, 5, and 6 are combined responses to separate questions concerning heroin "using a needle" and heroin "WITHOUT using a needle".

Item Number	Variable Label	Question text	Additional notes
		The next questions are about HEROIN, which is sometimes called smack, horse, skag. On how many occasions (if any) have you taken heroin . . .	
01100	#X 'H'/LIFETIME	. . . in your lifetime?	Single question on forms 1, 3 & 4
01110	#X 'H'/LAST12MO	. . . during the last 12 months?	Single question on forms 1, 3 & 4
01120	#X 'H'/LAST30DA	. . . during the last 30 days?	Single question on forms 1, 3 & 4
		On how many occasions (if any) have you taken heroin using a needle . . .	
29630	#X H USE NDL/LIFETIME	. . . in your lifetime?	Question is on forms 2, 5 & 6; responses combined with 29660: #X H LIF W/O NDL to create a composite 01100:'H'/LIFETIME variable
29640	#X H USE NDL/LAST12MO	. . . during the last 12 months?	Question is on forms 2, 5 & 6; responses combined with 29670: #X H 12MO W/O NDL to create a composite 01110:'H'/LAST12MO variable
29650	#X H USE NDL/LAST30DA	. . . during the last 30 days?	Question is on forms 2, 5 & 6; responses combined with 29680: #X H 30D W/O NDL to create a composite 01120:'H'/LAST30DA variable
		On how many occasions (if any) have you taken heroin WITHOUT using a needle . . .	
29660	#X H LIF W/O NDL	. . . in your lifetime?	Question is on forms 2, 5 & 6; responses combined with 29630: #X H USE NDL/LIFETIME to create a composite 01100:'H'/LIFETIME variable
29670	#X H 12MO W/O NDL	. . . during the last 12 months?	Question is on forms 2, 5 & 6; responses combined with 29640: #X H USE NDL/LAST12MO to create a composite 01110:'H'/LAST12MO variable
29680	#X H 30D W/O NDL	. . . during the last 30 days?	Question is on forms 2, 5 & 6; responses combined with 29650: #X H USE NDL/LAST30DA to create a composite 01120:'H'/LAST30DA variable

Missing Data for the Western Region

Beginning in 1997, a select group of questions were excluded from some schools in the Western region, rendering those schools potentially identifiable. Thus, these variables were intentionally changed to missing data (coded -9) for *all* schools in the Western region of the contiguous United States.

All datasets

Item number	Variable label	Question text
00370	R'ATTND REL SVC	How often do you attend religious services?
00380	RLGN IMP R'S LF	How important is religion in your life?

Form 2

Item number	Variable label	Question text
06520	FRQ FIGHT PARNTS	During the LAST 12 MONTHS, how often have you . . . Argued or had a fight with either of your parents?

Form 4

Item number	Variable label	Question text
10470	FEW GD MAR, ? IT	How much do you agree or disagree with each statement below? One sees so few good or happy marriages that one questions it as a way of life
10480	GD LIV TG BF MRG	How much do you agree or disagree with each statement below? It is usually a good idea for a couple to live together before getting married in order to find out whether they really get along
10490	1 PRTNR=RSTRCTVE	How much do you agree or disagree with each statement below? Having a close intimate relationship with only one partner is too restrictive for the average person

Form 5

Item number	Variable label	Question text
10060	FAM BUYS THG -ND	How much do you agree or disagree with each statement below? My family and I often buy things we really don't need; we could get along with much less
12150	FULLR LVS IF MRY	How much do you agree or disagree with each statement below? Most people will have fuller and happier lives if they choose legal marriage rather than staying single, or just living with someone
12190	HSB MAK IMP DCSN	How much do you agree or disagree with each statement below? The husband should make all the important decisions in the family

Missing Data for the Western Region, continued.

Form 6

Item number	Variable label	Question text
25180	#X PRNT CHK HMWK	How often do your parents (or stepparents or guardians) do the following? Check on whether you have done your homework
25190	#X PRNT HLP HMWK	How often do your parents (or stepparents or guardians) do the following? Provide help with your homework when it's needed
25200	#X PRNT GV CHORE	How often do your parents (or stepparents or guardians) do the following? Require you to do work or chores around the home
38090	#X PRNT LIMIT SCRN TIME	How often do your parents (or stepparents or guardians) do the following? Limit the amount of your screen time (such as video games, social media, TV/movies, etc.)
25220	#X PRNT LMT OUT	How often do your parents (or stepparents or guardians) do the following? Limit the amount of time you can go out with friends on school nights

OF SPECIAL NOTE: For researchers who wish to incorporate any of these omitted or truncated variables in their work, incorporate the complex sample design variables (stratum, cluster and unaltered sampling weight variables), and/or would like to use all available data for the Western region, these variables are now accessible through restricted access from NAHDAP. Please see Monitoring the Future (MTF) Restricted-Use Cross-Sectional Datasets for more information.

Substance Use Variables in the Core data set (DS1)

The following is a list of substance use variables in the Core data set (DS1), ordered by substance use category. DS1 is a compilation across all six survey forms of Part B (substance use) and Part C (demographics) of the surveys - the parts common to all forms - plus other substance use variables of interest that may not be on all forms (e.g. vaping-related variables).

Substance Category	Item Number	Variable Label	Variable number in the Core dataset

Questionnaire form 1 processing

The form 1 questionnaire contains many more specific drug related questions in Part B than do the other questionnaire forms. In the form 1 dataset, copies of the "core" or common drug prevalence variables are created and then processed so that their data will be comparable to that of the other forms. Data from the core versions are then copied to the grade 12 core dataset; the form 1 dataset retains both versions. The primary difference between the copies is that, for the core versions, nonuse is inferred from the respondents' adherence to the skip instructions (the other forms do not include the same instructions). The "core" variables copied into the form 1 dataset are:

Item Number	Variable label	Variable Number in the Form 1 data set
00780	#CIGS SMKD/30DAY (CORE)	V1102
00850	5+DRK ROW/LST 2W (CORE)	V1108
00860	#XMJ+HS/LIFETIME	V1115
00870	#XMJ+HS/LAST12MO	V1116
00880	#XMJ+HS/LAST30DA	V1117
00950	#X COKE/LIFETIME	V1124
00960	#X COKE/LAST12MO	V1125
00970	#X COKE/LAST30DA	V1126

Revised question text for the core dataset

For the core dataset only, additional text was added to particular questions that were part of a series. The initial question in the series contains text not repeated on subsequent questions within that series. This additional text is meant to clarify and provide detail about the question for the user. To help improve the clarity of subsequent questions within the series this additional text has been repeated on each question. This repeating text is identical to what was stated on the questionnaire for the first question in that series. It has been designated by being placed into {braces} to be distinguishable from text that actually appeared in the questionnaire. No modifications were made to the question text for any of the other parts.

Highlights for 2021

MTF data collection efforts in 2021

Data collection of the full nationally-representative samples of 12th graders (and 8th and 10th graders, too) resumed in 2021, with some changes necessitated by the ongoing COVID-19 pandemic. While the sampling procedures remained consistent, survey administrations were adapted for the hybrid teaching environments - remote and in-class learning. The MTF questionnaires were converted to web-based surveys. Students were provided a link to the survey, and the surveys could be completed on their own device or one provided by the school at home or in the classroom.

About half-way through the 2021 administration, it was discovered that parts of some questions were organized differently for the web survey than for the tablet survey, i.e. sets of questions appeared on different "screens" when comparing web and tablet surveys. The web surveys were reprogrammed to match the "screen breaks" in the 2019 tablet surveys. Please see the codebook section *Survey mode and design variables for 2021* and *Appendix D: Screen break details* in this document for identifying the variables impacted by the screen break issue.

Introduction of randomized blocks of questions

In an effort to shorten the length of the surveys, an experiment was conducted such that "blocks" of questions on a given form were asked of some respondents and not others. Each survey had two blocks that were randomly assigned within form to a respondent. The blocks were labeled "blue" and "orange". Please see *Randomization of question sets* and *Appendix E:Randomization of question sets* in the codebook for details.

Presentation experiment for the substance use consequences on form 3

With the programming of the web version of the survey in 2021, an experiment was conducted with Form 3 to determine the best way to present the series of questions about substance use and potential consequences of use: a grid presentation or a separate series of questions for each substance (alcohol, marijuana, other illicit drugs). For the grid presentation, the respondents read a single question and indicated in a separate column for each of the three substances whether or not they had experienced the consequence. For the separate series presentation, the same set of questions were presented, but the questions were presented in three separate lists, one for each substance (alcohol, marijuana, other illicit drugs). Please see *Form 3 Substance use consequences presentation experiment* and *Appendix F: Form 3 Substance use consequences question presentation experiment* in the codebook for details.

ICPSR PROCESSING INFORMATION

WEIGHTING INFORMATION

Frequency and percentage distributions displayed in codebooks produced after 2007 are unweighted, rather than weighted by variable ARCHIVE_WT (previously V5) as they had been in previous years. This change was made to simplify both the production of the codebooks and their interpretation by the analyst.

FILE STRUCTURE

MONITORING THE FUTURE: A CONTINUING STUDY OF AMERICAN YOUTH, 2021 is available from ICPSR as seven logical record length datasets. Each dataset consists of SAS, SPSS, and Stata setup files containing all technical information for each variable in the corresponding data file, and the data file itself. The data are sorted by case. The datasets are organized by the form number (questionnaire version) used. For each part, the data are also available from ICPSR in the following formats: SAS transport (CPORT) file, SPSS system file, and Stata system file, with SAS and Stata supplemental syntax files, and a tab-delimited ASCII text file.

Part #	Form	# of variables	Logical record length	Unweighted N
1	Core	232	481	9022
2	Form 1	653	1324	1498
3	Form 2	394	806	1547
4	Form 3	431	880	1477
5	Form 4	331	679	1519
6	Form 5	427	872	1481
7	Form 6	369	756	1500

Appendix B - Sample Size and Student Response Rates, continued.

	Number of Public Schools	Number of Private Schools	Total Number of Schools	Total Number of Students	Student Response Rate*
2010	104	22	126	15,127	85
2011	110	19	129	14,855	83
2012	107	20	127	14,343	83
2013	106	20	126	13,180	82
2014	105	17	122	13,015	82
2015	101	20	121	13,730	83
2016	100	20	120	12,600	80
2017	105	18	123	13,522	79
2018	106	23	129	14,502	81
2019	108	20	128	13,713	80
2020	29	7	36	3,770	79
2021	82	16	98	9,022	69

* The student response rate is derived by dividing the attained sample by the target sample (both based on weighted numbers of cases). The target sample is based upon listings provided by schools. Since such listings may fail to take account of recent student attrition, the actual response rate may be slightly underestimated.

Appendix C: MTF's Complex Sample Design and Combining Multiple Grades for Analysis

As the base year data - grades 8, 10 and 12 - are independently sampled using a multi-stage sampling design, it is often desirable to incorporate the complex sample design information into analyses. The MTF sample is drawn such that the data for each grade are representative of the 48 contiguous United States. The three stages of sampling are the geographic area, then the selection of one or more schools in the area, and then students within the school. (Please see *Sampling Information* earlier in this guide for more details.)

When researchers wish to include multiple grades in a single analysis, there are two sampling-related issues to address: weighting and clustering.

Weighting

Each grade is sampled independently and is a nationally-representative sample of the given grade. A probability sampling weight is assigned to each respondent to account for variations in the sizes of samples from one school to another, as well as the variations in selection probabilities occurring at the earlier stages of sampling. The weight variables provided, *V5 for 8th/10th grade* and *ARCHIVE_WT for 12th grade*, are appropriate to use when analyzing data for a *single* grade.

When combining grades for analysis, it is necessary to adjust the probability sampling weight to take into account the different sizes of the 8th, 10th, and 12th grade populations. If each of the three grades had the same number of students in the U.S., then no adjustments would be necessary. In actuality, the number of students in 12th grade is typically smaller than the number in 8th and 10th grade (which are similar in size). In order for MTF estimates to represent the total 8th, 10th and 12th grade population, it is therefore necessary to modify the weights so that each grade has an influence on the analysis proportional to its size in the U.S. population.

To adjust the sampling weight for combined-grade analyses, we need to know the total size of the population from which the sample is selected and the sizes of each of the grade-specific populations that make up the total. The total frame size (TFS) is the size of the population from which the grade-specific samples are selected. The grade-specific frame size (GFS) is the size of population for a specific grade. MTF updates the TFS and GFS every four years. See Table 1 for details.

Table 1. Total Frame Size (TFS) and Grade-specific Frame Sizes (GFS) for all cycles of the MTF since 1991.

Cycle	Survey Years	Grade-specific sampling frame size (GFS)			Total Frame Size (TFS)
		8th	10th	12th	
1	1991 1992 1993 1994	3,420,000	3,240,000	2,870,000	9,530,000
2	1995 1996 1997 1998	3,269,256	3,280,256	2,938,114	9,487,626
3	1999 2000 2001 2002	3,774,722	3,444,897	2,885,324	10,104,943
4	2003 2004 2005 2006	3,899,699	3,764,581	3,118,962	10,783,242
5	2007 2008 2009 2010	4,267,771	4,002,331	3,312,853	11,582,955
6	2011 2012 2013 2014	4,181,154	4,260,398	3,567,159	12,008,711
7	2015 2016 2017 2018	3,996,287	4,179,424	3,654,099	11,829,810
8	2019 2020 2021 2022	4,110,489	4,255,843	3,737,846	12,104,178

With the information about total and grade-specific form sizes for each cycle of the MTF sample, the Weighting Correction Factor (WCF) for each year and grade can be calculated. The WCF is simply the proportion of the total sample represented by the grade, or GFS/TFS. Table 2 provides the WCF values for the eight cycles of the MTF.

Table 2. Weighting correction factors for each cycle of the MTF

Cycle	Survey Years	Weighting Correction factor (WCF)		
		8th	10th	12th
1	1991 1992 1993 1994	0.358866737	0.339979014	0.301154250
2	1995 1996 1997 1998	0.344581036	0.345740441	0.309678522
3	1999 2000 2001 2002	0.373552033	0.340912067	0.285535901
4	2003 2004 2005 2006	0.361644392	0.349114023	0.289241584
5	2007 2008 2009 2010	0.368452696	0.345536264	0.286011039
6	2011 2012 2013 2014	0.348176753	0.354775629	0.297047618
7	2015 2016 2017 2018	0.337814978	0.353295953	0.308889069
8	2019 2020 2021 2022	0.339592577	0.351601158	0.308806265

Examples for creating combined sampling weight variables for analysis

Single year - all grades

Analyses combining 8th, 10th, and 12th grade students in 2018 would include the following code for each of the three grades. This syntax creates the combined weight variable, `v5c`, with `grade` having the values 8, 10, 12; `v1`=year of administration; `V5` or `ARCHIVE_WT`=MTF sampling weight for grades 8/10 and 12, respectively. The weighting correction factors (`0.3378, 0.3533, and 0.3089`) for grades 8, 10 and 12, respectively, are found in Table 2 and included in the calculation as multipliers of the MTF sampling weight:

```
if grade =  8 and v1 = 2018 then v5c = 0.3378*V5
if grade = 10 and v1 = 2018 then v5c = 0.3533*V5
if grade = 12 and v1 = 2018 then v5c = 0.3089*ARCHIVE_WT
```

For analysis, a statement such as `weight=v5c` would then be used to incorporate the combined weight variable that has been adjusted to reflect the proportion of the sample represented by each grade.

Multiple years - all grades

Analysis including multiple years of data would require the inclusion of additional recode statements with the desired years and corresponding weighting correction factors (see Table 2). For example, combining grades 8, 10 and 12 for 2018 and 2019 would include the following code to create the combined weight variable, `v5c`:

```
if grade =  8 and v1 = 2018 then v5c = 0.3378*V5
if grade = 10 and v1 = 2018 then v5c = 0.3533*V5
if grade = 12 and v1 = 2018 then v5c = 0.3089*ARCHIVE_WT

if grade =  8 and v1 = 2019 then v5c = 0.3396*V5
if grade = 10 and v1 = 2019 then v5c = 0.3516*V5
if grade = 12 and v1 = 2019 then v5c = 0.3088*ARCHIVE_WT
```

For analysis, a statement such as `weight=v5c` would then be used to incorporate the combined weight variable that has been adjusted to reflect the proportion of the sample represented by each grade.

Single year - combining two grades

Analyses that include only two of the three grades would use the weighting correction factors in Table 2 and some algebra to get the appropriate combined sampling weight.

To determine the combined sampling weight for the each of the grades included in the analytic sample, the weighting correction factor is calculated as the proportion of each grade-specific frame size in relation to the combined grade-specific frame sizes of interest. This means a calculation such as this is needed:

```
WCF[one grade] / (WCF[one grade] + WCF[other grade])
```

The resulting value from this calculation would then be multiplied by the MTF sampling weight (`V5` or `ARCHIVE_WT`, as appropriate) to get the combined sampling weight (`v5c`) to be used in analysis.

For example, using the 2018 weighting correction factors in Table 2, an analysis that included only 8th and 12th grade data would compute a new weighting correction factor as follows, where `0.3378` is the weighting correction factor for 8th graders in 2018 and `0.3098` is the weighting correction factor for 12th graders in 2018:

```
if grade = 8 and v1=2018 then v5c = (0.3378 / (0.3378 + 0.3089))*V5
if grade =12 and v1=2018 then v5c = (0.3089 / (0.3378 + 0.3089))*ARCHIVE_WT
```

If the analyst chooses to do the calculations, for analyses using grades 8 and 12 in 2018, the new weighting correction factor for 8th grade would be `0.52`(which is `0.34/(0.34+0.31`), and for 12th grade it would be `0.48`(which is `0.31/(0.34+0.31`).

For analysis, a statement such as `weight=v5c` would then be used to incorporate the combined weight variable that has been adjusted to reflect the proportion of the sample represented by each grade.

Multiple years - two grades

Analysis of multiple years and only two grades would include additional recodes with the desired years and grades, an expansion of what is needed for combining two grades in a single year.

For example, using 8th and 12th grades for 2018 and 2019, the following statements are needed to calculate the appropriate weighting correction factors:

```
if grade =  8 and v1=2018 then v5c = (0.3378 / (0.3378 + 0.3089))*V5
if grade = 12 and v1=2018 then v5c = (0.3089 / (0.3378 + 0.3089))*ARCHIVE_WT

if grade =  8 and v1=2019 then v5c = (0.3396 / (0.3396 + 0.3088))*V5
if grade = 12 and v1=2019 then v5c = (0.3088 / (0.3396 + 0.3088))*ARCHIVE_WT
```

For analysis, a statement such as `weight=v5c` would then be used to incorporate the combined weight variable that has been adjusted to reflect the proportion of the sample represented by each grade.

Special case: When the proportion of students that receive a survey question differs by grade

In some cases, the proportion of students who receive a question differs across grades. For example, take the MTF question on failed attempts to quit cigarettes, which is "Have you ever tried to stop smoking cigarettes and found that you could not?" For 8th and 10th grade students, 100% received this question since 1991. In 12th grade only a randomly-selected 1/6 received this question from 1991 to 1996, and a randomly-selected 1/3 received it from 1997 onward.

Correct adjustment of weights for analysis that combines all grades first requires modification as described in the sections above when creating `v5c`. In addition, the weights (`v5c`) then need to be further adjusted to compensate for unequal proportions receiving the question across grades. In the example above for the question "Have you ever tried to stop smoking cigarettes and found that you could not?" one way to accomplish this is with the code:

```
if grade = 12 and v1 > 1990 and v1 < 1997 then v5c=v5c*6
if grade = 12 and v1 > 1996 then v5c=v5c*3
```

To understand the rationale for this adjustment, it is useful to think of each MTF respondent as representing a larger number of students in the total population (an average of ~250 in a typical year). If an analysis pool contains 100% of 8th and 10th grade students but only 1/3 of 12th grade students, then 2/3 of the 12th grade students in the total population are not represented. One remedy in this case is to upweight the 12th grade students who did receive the question by a factor of three (the reciprocal of the proportion that received the question).

Note that this additional adjustment is only needed when the proportion sampled differs across grades. For example, if all grades consisted of only a 1/3, randomly-selected sample for a given survey item, then only the adjustments noted in "Single year-all grades" or "Multiple year-all grades" is needed, and no further adjustment is necessary.

For analysis, a statement such as `weight=v5c` would then be used to specify the combined weight variable that has been adjusted to reflect the proportion of the sample represented by each grade *and* the proportion of each grade that received a particular survey item.

Clustering

As the MTF samples are drawn using a 3-stage sampling procedure, it is most technically correct to include all sampling-related variables in analyses. Variables are maintained by MTF to account for the sampling design; however, these design variables, stratum and cluster, are omitted from the public use data files for reasons of confidentiality.

For researchers who wish to incorporate the complex sample design (stratum, cluster) and the unaltered sampling weight variables in their work, these variables are now available through restricted access from NAHDAP. Please see Monitoring the Future (MTF) Restricted-Use Cross-Sectional Datasets for more information.

Appendix D: Screen break details

Variable details for the "screen break" issues in the 2021 surveys

Here is the list of variables affected by the mid-collection survey reprogramming for the screen breaks for multiple-screen questions. Using the variable SURVEY_VERSION, users will note that when the value = 3 (original survey-before the change), the data for these variables have been assigned a special missing data code of SCREEN BREAK:(-1). When the value of SURVEY_VERSION = 4 (replacement survey-to match 2019), valid data will be present for these variables.

Appendix E: Randomization of question sets

In an effort to shorten the length of the surveys, an experiment was conducted such that "blocks" of questions were asked of some respondents and not others. Each survey had two blocks that were randomly assigned within form to a respondent. The blocks are labeled "blue" and "orange". This appendix details the questions in each block for each form of the 2021 survey.

Form 1, BLUE block

Item Number	Variable Label	Variable Number	Question Text
01200	US NEEDS PLANNG	V1634	How much do you agree or disagree with each of the following statements? The nation needs much more long-range planning and coordination to be prepared for the future

29590	#DA GUN SCHL/4WK	V6507	During the LAST FOUR WEEKS, on how many days (if any) did you carry a gun to school?

Appendix F: Form 3 Substance use consequences question presentation experiment

This appendix provides examples of the grid presentation and separate substance presentation for the substance use consequences questions. Following the examples, question details are provided for all questions in the series. The variable RANDOM_TEST provides information to differentiate the "grid" and "separate" series of questions.

Example of the "grid" presentation, all substances presented with the same stem question:
(RANDOM_TEST = 1)

The next questions ask about your use of alcohol, marijuana, and other illicit drugs during the last 12 months. (Other illicit drugs include hallucinogens, cocaine, etc. and prescription amphetamines, sedatives, tranquilizers, and narcotics used without a doctor telling you to take them.)

Think back over the last 12 months. Did your use of alcohol, marijuana, or other illicit drugs cause you any of the following problems, even just a little? (FOR ANY DRUG YOU USED IN THE LAST 12 MONTHS, SELECT ALL THAT APPLY. FOR ANY DRUG YOU DID NOT USE, LEAVE THAT COLUMN BLANK.)

Has your use of these drugs in the LAST 12 MONTHS...

	Alcohol	Marijuana	Other Illicit Drugs
Caused you to behave in ways that you later regretted?	○	○	○
Hurt your relationship with your spouse/partner or girlfriend/boyfriend?	○	○	○
Hurt your relationship with your child(ren)?	○	○	○
Hurt your relationship with your parents?	○	○	○

Example of the "separate" presentation for each substance:
(RANDOM_TEST = 2)

❖ ❖ ❖ ❖ ❖ ❖ ❖

The next questions ask about your use of alcohol, marijuana, and other illicit drugs during the last 12 months. (Other illicit drugs include hallucinogens, cocaine, etc. and prescription amphetamines, sedatives, tranquilizers, and narcotics used without a doctor telling you to take them

Think back over the last 12 months. Did your use of alcohol cause you any of the following problems, even just a little?

Has your use of alcohol in the LAST 12 MONTHS... (Select all that apply.)

Caused you to behave in ways that you later regretted?
Hurt your relationship with your spouse/partner or girlfriend/boyfriend?
Hurt your relationship with your child(ren)?
Hurt your relationship with your parents?

❖ ❖ ❖ ❖ ❖ ❖ ❖

Think back over the last 12 months. Did your use of marijuana cause you any of the following problems, even just a little?

Has your use of marijuana in the LAST 12 MONTHS... (Select all that apply.)

Caused you to behave in ways that you later regretted?
Hurt your relationship with your spouse/partner or girlfriend/boyfriend?
Hurt your relationship with your child(ren)?
Hurt your relationship with your parents?

Here is the specific variable information for each question in the substance use consequences section. Regardless of presentation, grid or separate, all data are included in the variables. Use the variable RANDOM_TEST to determine the survey condition under which the questions were answered.

ICPSR 38503

Monitoring the Future: A Continuing Study of American Youth (12th-Grade Survey), 2021

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, arithmetic mean, median, mode, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

Core Data

RESPONDENT_ID: R'S ID-SERIAL

Value	Label	Unweighted Frequency	%
-9	MISSING:(-9)	-	-
	Total	**9,022**	**100%**

Based upon 9,022 valid cases out of 9,022 total cases.

- Mean: 35685.31
- Minimum: 10001.00
- Maximum: 61521.00
- Standard Deviation: 17075.85

Location: 1-5 (width: 5; decimal: 0)
Variable Type: numeric
(Range of) Missing Values: -9

Value	Label	Unweighted Frequency	%
1	FORM 1:(1)	1498	16.6 %
2	FORM 2:(2)	1547	17.1 %
3	FORM 3:(3)	1477	16.4 %
4	FORM 4:(4)	1519	16.8 %
5	FORM 5:(5)	1481	16.4 %
6	FORM 6:(6)	1500	16.6 %
	Total	**9,022**	**100%**

Based upon 9,022 valid cases out of 9,022 total cases.

- Minimum: 1.00
- Maximum: 6.00

Location: 10-11 (width: 2; decimal: 0)
Variable Type: numeric
(Range of) Missing Values: -9

SURVEY_VERSION: 90012:SURVEY VERSION

Item Number: 90012

This variable provides information to differentiate the data collected before and after the survey version change during the 2021 data collection. Please see the codebook for details.

3="ORIGINAL 2021 VERSION" 4="REPLACED 2021 VERSION"

Value	Label	Unweighted Frequency	%
3	ORIGINAL 2021 VERSION	5936	65.8 %
4	REPLACED 2021 VERSION	3086	34.2 %
	Total	**9,022**	**100%**

Based upon 9,022 valid cases out of 9,022 total cases.

- Minimum: 3.00
- Maximum: 4.00

Location: 12-12 (width: 1; decimal: 0)
Variable Type: numeric

V545: 89978:SURVEY MODE: 1=PAPER 2=TABLET 3=WEB

Item Number: 89978

This variable is an indicator of survey mode: paper or tablet or web.
This variable replaces TABLET (89977:RESPONDENT: TABLET=1 PAPER=0) in prior years.

1="PAPER" 2="TABLET" 3="WEB"

Value	Label	Unweighted Frequency	%
1	PAPER:(1)	0	0.0 %
2	TABLET:(2)	0	0.0 %
3	WEB:(3)	9022	100.0 %
	Total	**9,022**	**100%**

Based upon 9,022 valid cases out of 9,022 total cases.

- Minimum: 3.00
- Maximum: 3.00

Location: 13-14 (width: 2; decimal: 0)
Variable Type: numeric
(Range of) Missing Values: -9

V548: 90016:MODE OF SURVEY ADMIN

Item Number: 90016

This variable provides information on the mode of survey administration to the students.

4="SYNCHRONOUS" 5="ASYNCHRONOUS" 6="MULTIPLE TYPES"

Value	Label	Unweighted Frequency	%
1	CLASS:(1)	0	0.0 %
2	MASS:(2)	0	0.0 %
3	MULTIPLE MASS:(3)	0	0.0 %
4	SYNCHRONOUS:(4)	6170	68.4 %
5	ASYNCHRONOUS:(5)	1602	17.8 %
6	MULTIPLE TYPES:(6)	1250	13.9 %
	Total	**9,022**	**100%**

Based upon 9,022 valid cases out of 9,022 total cases.

- Minimum: 4.00
- Maximum: 6.00

Location: 15-16 (width: 2; decimal: 0)
Variable Type: numeric
(Range of) Missing Values: -9

RANDOM_GROUP: 90013:RANDOM GROUP: 1=BLUE 2=ORANGE

Item Number: 90013

This variable provides information to differentiate the "blue" and "orange" block questions.
Please see the codebook for details.

1="BLUE" 2="ORANGE"

Value	Label	Unweighted Frequency	%
1	BLUE:(1)	4482	49.7 %
2	ORANGE:(2)	4540	50.3 %
	Total	**9,022**	**100%**

Based upon 9,022 valid cases out of 9,022 total cases.

- Minimum: 1.00
- Maximum: 2.00

Location: 17-18 (width: 2; decimal: 0)
Variable Type: numeric
(Range of) Missing Values: -9

RANDOM_TEST: 90014:RANDOM TEST FORM 3: D7 AND D8

Item Number: 90014

This variable provides information to differentiate the "grid" and "separate" series of questions in form 3.
Please see the codebook for details.

0="ONLY ON FORM 3" 1="GRID FORMAT" 2="SEPARATE FORMAT"

Value	Label	Unweighted Frequency	%
0	ONLY ON FORM 3:(0)	7545	83.6 %
1	GRID FORMAT:(1)	761	8.4 %
2	SEPARATE FORMAT:(2)	716	7.9 %
	Total	**9,022**	**100%**

Based upon 9,022 valid cases out of 9,022 total cases.

V16: 80016:SELF-REP/NOT=0

Item Number: 80016

Component variable, along with V17, for a standardized 3-category measure of population density. Population density is largest ("Large MSA") when V16 is coded 1 and V17 is coded 1, medium-sized ("Other MSA") when V16 is 0 and V17 1, and smallest ("Non-MSA") when both V16 and V17 are coded 0.

0="Non Self-representing" 1="Self-representing"

Value	Label	Unweighted Frequency	%
0	NOT SELF REPRESENTING:(0)	4532	50.2 %
1	SELF REPRESENTING:(1)	4490	49.8 %
	Total	**9,022**	**100%**

Based upon 9,022 valid cases out of 9,022 total cases.

- Minimum: 0.00
- Maximum: 1.00

Location: 38-39 (width: 2; decimal: 0)
Variable Type: numeric
(Range of) Missing Values: -9

V17: 80017:SMSA/NON-SMSA=0

Item Number: 80017

MSA: Metropolitan Statistical Area as defined for the US Census, a county or group of contiguous counties (or, in New England, Consolidated Metropolitan Areas) that contain at least one city of 50,000 inhabitants or more. (Formerly referred to as "Standard Metropolitan Statistical Area".)

0=Not MSA 1=MSA

Value	Label	Unweighted Frequency	%
0	NON-MSA:(0)	1631	18.1 %
1	MSA:(1)	7391	81.9 %
	Total	**9,022**	**100%**

Based upon 9,022 valid cases out of 9,022 total cases.

- Minimum: 0.00
- Maximum: 1.00

Location: 40-41 (width: 2; decimal: 0)
Variable Type: numeric
(Range of) Missing Values: -9

RESPONDENT_AGE: 89848:AGE <>18 DICHOTOMY

Item Number: 00010-00020

Component questions:
1) "In what year were you born?" (item 00010),
2) "In what month were you born?" (item 00020), and
3) Date of questionnaire administration as recorded by interviewer.

1="under 18 years old" 2="18 years of age and over"

Please see the codebook section "MTF Variable Information" for more details on the creation of this variable.

Value	Label	Unweighted Frequency	%
1	UNDER 18:(1)	3618	40.1 %
2	18 OR OLDER:(2)	4686	51.9 %
	Missing Data		
-9	MISSING:(-9)	718	8.0 %
	Total	**9,022**	**100%**

Based upon 8,304 valid cases out of 9,022 total cases.

- Minimum: 1.00
- Maximum: 2.00

Location: 42-43 (width: 2; decimal: 0)
Variable Type: numeric
(Range of) Missing Values: -9

V2150: 00030:R'S SEX

Item Number: 00030

What is your sex?

1="Male" 2="Female" 3="Other or prefer not to answer"

Value	Label	Unweighted Frequency	%
1	MALE:(1)	3830	42.5 %
2	FEMALE:(2)	4135	45.8 %
3	OTHER/PREFER NOT ANSWER:(3)	344	3.8 %
	Missing Data		
-9	MISSING:(-9)	713	7.9 %
	Total	**9,022**	**100%**

Based upon 8,309 valid cases out of 9,022 total cases.

Variable Type: numeric
(Range of) Missing Values: -9

V2151: 89501:R'S RACE B/W/H

Item Number: 00041-00049

How do you describe yourself?

(Select one or more responses.) Black or African American; Mexican American or Chicano; Cuban American; Puerto Rican; Other Hispanic or Latino; Asian American; White (Caucasian); American Indian or Alaska Native; Native Hawaiian or Other Pacific Islander; Middle Eastern.

Recoded in this dataset so that "Black or African American" = 1, "White (Caucasian)" = 2; Hispanic = 3 ("Mexican..." or "Cuban..." or "Puerto Rican" or "Other Hispanic...").

All other responses, including those of respondents who fell into more than one of the three categories, were deleted.

1="Black or African American" 2="White (Caucasian)" 3="Hispanic [see above]".

Value	Label	Unweighted Frequency	%
1	BLACK:(1)	916	10.2 %

ICPSR 38503

Monitoring the Future: A Continuing Study of American Youth (12th-Grade Survey), 2021

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, arithmetic mean, median, mode, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

The next questions are about AMPHETAMINES and OTHER STIMULANT DRUGS, which are sometimes prescribed by doctors for people who have trouble paying attention, are hyperactive, have ADHD, or have trouble staying awake. Drugstores are not supposed to sell them without a prescription from a doctor.

Amphetamines are sometimes called: Uppers, Ups, Speed, Dexies, Pep Pills, Diet Pills, Meth or Crystal Meth. They include the following drugs: Dexedrine, Ritalin, Adderall, Concerta, Vyvanse, Methamphetamine.

IN YOUR ANSWERS ABOUT AMPHETAMINES AND OTHER STIMULANT DRUGS, DO NOT INCLUDE ANY NON-PRESCRIPTION OR OVER-THE-COUNTER DRUGS.

Have you ever taken amphetamines or other stimulant drugs because a doctor told you to use them?

1="No" 2="Yes, but I had already tried them on my own." 3="Yes, and it was the first time I took any."

The next questions are about SEDATIVES, including BARBITURATES, which doctors sometimes prescribe to help people relax or get to sleep. Drugstores are not supposed to sell them without a prescription.

Sedatives are sometimes called: Downs, Downers. They include the following drugs: Phenobarbital, Seconal, Dalmane, Restoril, Halcion, Ambien, Lunesta, Sonata, Intermezzo, Zolpimist.

Have you ever taken sedatives because a doctor told you to use them?

1="No" 2="Yes, but I had already tried them on my own." 3="Yes, and it was the first time I took any."

ICPSR 38503

Monitoring the Future: A Continuing Study of American Youth (12th-Grade Survey), 2021

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, arithmetic mean, median, mode, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

ICPSR 38503

Monitoring the Future: A Continuing Study of American Youth (12th-Grade Survey), 2021

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, arithmetic mean, median, mode, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

V3603: 30978:ORCVD COUNSEL-1YR

Item Number: 30978

RANDOM_TEST=1: Think back over the last 12 months. Did your use of alcohol, marijuana, or other illicit drugs cause you any of the following problems, even just a little?
(FOR ANY DRUG YOU USED IN THE LAST 12 MONTHS, MARK ALL THAT APPLY.
FOR ANY DRUG YOU DID _NOT_ USE, LEAVE THAT COLUMN BLANK.)
RANDOM_TEST=2: Did your use of other illicit drugs DURING THE LAST 12 MONTHS lead to any of the following, even just a little?
(Other illicit drugs include hallucinogens, cocaine, etc. and prescription amphetamines, sedatives, tranquilizers, and narcotics used without a doctor telling you to take them.)
(Select all that apply.) You got some type of counseling or therapy to assist you in quitting or reducing your use of the drug

ICPSR 38503

Monitoring the Future: A Continuing Study of American Youth (12th-Grade Survey), 2021

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, arithmetic mean, median, mode, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

Item Number: 00980

Amphetamines and other stimulant drugs are sometimes prescribed by doctors for people who have trouble paying attention, are hyperactive, have ADHD, or have trouble staying awake. They are sometimes called uppers, ups, pep pills, and include drugs like Adderall and Ritalin. Drugstores are not supposed to sell them without a prescription from a doctor. Amphetamines do NOT include any non-prescription drugs, such as over-the-counter diet pills or stay-awake pills. On how many occasions (if any) have you taken amphetamines on your own--that is, without a doctor telling you to take them . . . in your lifetime?

V4449: 31460:EVER AD STIM DR

Item Number: 31460

The next questions are about drugs that doctors sometimes prescribe for people who have problems concentrating on one task at a time (attention deficit disorder), or with being too active or too disruptive (hyperactive), or both (ADHD). Stimulant-type drugs (i.e., amphetamine, methylphenidate, and pemoline) are prescribed for these conditions. These drugs include Ritalin, Adderall, Concerta, Metadate, Dexedrine, Focalin, Vyvanse, and others. Have you ever taken any of these stimulant-type prescription drugs under a doctor's supervision for these conditions? (Do not count drugs that are not stimulant-type, like Strattera, Wellbutrin, Provigil, Tenex, Intuniv, or Catapres.)

ICPSR 38503

Monitoring the Future: A Continuing Study of American Youth (12th-Grade Survey), 2021

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, arithmetic mean, median, mode, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

Item Number: 00980

Amphetamines and other stimulant drugs are sometimes prescribed by doctors for people who have trouble paying attention, are hyperactive, have ADHD, or have trouble staying awake. They are sometimes called uppers, ups, pep pills, and include drugs like Adderall and Ritalin. Drugstores are not supposed to sell them without a prescription from a doctor. They do NOT include any nonprescription drugs such as over-the-counter diet pills or stay-awake pills. On how many occasions (if any) have you taken amphetamines or other prescription stimulant drugs on your own-that is, without a doctor telling you to take them . . . in your lifetime?

V5523: 31460:EVER AD STIM DR

Item Number: 31460

The next questions are about drugs that doctors sometimes prescribe for people who have problems concentrating on one task at a time (attention deficit disorder), or with being too active or too disruptive (hyperactive), or both (ADHD). Stimulant-type drugs (i.e., amphetamine, methylphenidate, and pemoline) are prescribed for these conditions. These drugs include Ritalin, Adderall, Concerta, Metadate, Dexedrine, Focalin, Vyvanse, and others. Have you ever taken any of these stimulant-type prescription drugs under a doctor's supervision for these conditions? (Do not count drugs that are not stimulant-type, like Strattera, Wellbutrin, Provigil, Tenex, Intuniv, or Catapres.)

ICPSR 38503

Monitoring the Future: A Continuing Study of American Youth (12th-Grade Survey), 2021

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, arithmetic mean, median, mode, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

V6127: 00980:#X AMPH/LIFETIME

Item Number: 00980

Amphetamines are sometimes prescribed by doctors for people who have trouble paying attention, are hyperactive, have ADHD, or have trouble staying awake. They are sometimes called uppers, ups, pep pills, and include drugs like Adderall and Ritalin. Drugstores are not supposed to sell them without a prescription from a doctor. Amphetamines do NOT include any nonprescription drugs, such as over-the-counter diet pills or stay-awake pills. On how many occasions (if any) have you taken amphetamines on your own, that is, without a doctor telling you to take them . . . in your lifetime?

V49: 89849:# SIBLINGS

Item Number: 00075-00076

Component questions: "How many brothers and sisters do you have? (Include stepbrothers and sisters and half-brothers and sisters) a) Older brothers and sisters" (item 00075); b) Younger brothers and sisters" (item 00076).

0="None" 1="One" 2="Two" 3="Three" 4="Four" 5="Five" 6="Six or more".

For this dataset, responses to the two questions are added and bracketed so that 3 is the highest category, meaning "Three or more younger or older brothers or sisters".
